DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5, 8, 9, 23 and 24 are rejected under 35 U.S.C. 102(e) as being anticipated by Onaka et al.

Onaka et al disclose an optical amplifier that comprises: means (45) for amplifying a wdm signal; means (55) for generating a probe light control signal; means (43) for combining the probe light with signal input to the amplification means; means (33) for detecting the power of light input to the amplification means; and means (39) for controlling the power of the probe light. This structure directly reads on claims 1, 2, 4, 5, 23 and 24. Claim 3 reads on element 47. Claims 8 and 9 read on the descriptions of elements 39 and 38 provided in the detailed specification.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Onaka et al.

Art Unit: 3663

Claims 6 and 7 set forth structure that was well known at the time of the present application to control the power of a light source. This structure would have been obvious because Onaka et al teaches that the output of the probe light source be controllable.
